UPDATE package.json (1058 bytes)

✓ Packages successfully installed.

** Executing migrations of package '@angular/cli' **

> Remove 'defaultProject' option from workspace configuration.

The project to use will be determined from the current working directory.

Migration completed (No changes made).

> Replace removed 'defaultCollection' option in workspace configuration with 'schematicCollections'.

Migration completed (No changes made).

Migration completed (No changes made).

** Executing migrations of package '@angular/core' **

> In Angular version 15.2, the guard and resolver interfaces (CanActivate, Resolve, etc) were deprecated.

This migration removes imports and 'implements' clauses that contain them.

Migration completed (No changes made).

> As of Angular v16, the `moduleId` property of `@Component` is deprecated as it no longer has any effect.

Migration completed (No changes made).

```
PS C:\Users\ACER\source\repos\AppSistemaVenta> ng update @angular/cli@17
@angular/core@17
```

The installed Angular CLI version is outdated.

Installing a temporary Angular CLI versioned 17.3.17 to perform the update.

✓ Packages successfully installed.

UPDATE package.json (1059 bytes)

✓ Packages successfully installed.

** Executing migrations of package '@angular/cli' **

> Replace usages of '@nguniversal/builders' with '@angular-devkit/build-angular'.

Migration completed (No changes made).

> Replace usages of '@nguniversal/' packages with '@angular/ssr'.

Migration completed (No changes made).

> Replace deprecated options in 'angular.json'.

UPDATE angular.json (2780 bytes)

Migration completed (1 file modified).

> Add 'browser-sync' as dev dependency when

'@angular-devkit/build-angular:ssr-dev-server' is used, as it is no longer a direct dependency of '@angular-devkit/build-angular'.

Migration completed (No changes made).

** Executing migrations of package '@angular/core' **

> Angular v17 introduces a new control flow syntax that uses the @ and } characters.
This migration replaces the existing usages with their corresponding HTML entities.
UPDATE src/app/app.component.html (23123 bytes)

> Updates `TransferState`, `makeStateKey`, `StateKey` imports from
`@angular/platform-browser` to `@angular/core`.
Migration completed (No changes made).

> CompilerOption.useJit and CompilerOption.missingTranslation are unused under Ivy.
This migration removes their usage
Migration completed (No changes made).

> Updates two-way bindings that have an invalid expression to use the longform expression
instead.
Migration completed (No changes made).

PS C:\Users\ACER\source\repos\AppSistemaVenta> ng update @angular/cli@18
@angular/core@18

The installed Angular CLI version is outdated.

Installing a temporary Angular CLI versioned 18.2.20 to perform the update.

✓ Packages successfully installed.

Using package manager: npm

Collecting installed dependencies...

✓ Installing packages

** Optional migrations of package '@angular/cli' **

This package has 1 optional migration that can be executed.

Optional migrations may be skipped and executed after the update process, if preferred.

Select the migrations that you'd like to run [use-application-builder] Migrate application projects to the new build system.

(<https://angular.dev/tools/cli/build-system-migration>)

› Migrate application projects to the new build system.

'application' builder.

You can read more about this, including known issues and limitations, here:

<https://angular.dev/tools/cli/build-system-migration>

The output location of the browser build has been updated from "dist/app-sistema-venta" to "dist/app-sistema-venta/browser". You might need to adjust your deployment pipeline or, as an alternative, set outputPath.browser to "" in order to maintain the previous functionality.

UPDATE angular.json (2751 bytes)

UPDATE tsconfig.json (898 bytes)

Migration completed (2 files modified).

** Executing migrations of package '@angular/core' **

› Updates two-way bindings that have an invalid expression to use the longform expression instead.

Migration completed (No changes made).

› Replace deprecated HTTP related modules with provider functions.

Migration completed (No changes made).

› Updates calls to afterRender with an explicit phase to the new API.

Migration completed (No changes made).

```
PS C:\Users\ACER\source\repos\AppSistemaVenta> ng update @angular/cli@19
@angular/core@19
```

The installed Angular CLI version is outdated.

Installing a temporary Angular CLI versioned 19.2.15 to perform the update.

Using package manager: npm

Collecting installed dependencies...
